# *Skin Treatments*

## **Botox/Fillers**

Botox is used to soften facial lines and wrinkles by causing the muscle to relax and thereby lessen the lines of facial expression. **Fillers** work by replacing lost volume and can further enhance the smoothing effects of Botox. Fillers can also be used to replace volume in the mid face and lips, giving a more lifted, rested and youthful appearance.

## **Microdermabrasion/Chemical Peels**

Microdermabrasion sprays micro-crystals over the skin, gently resurfacing/smoothing the texture of your skin. It is often used before a chemical peel. A

**Chemical Peel**, when applied to the skin, adds to further remove damaged upper layers of the skin to reveal new, regenerated, glowing skin.

## **Fractional CO2 Laser Peels**

Fractional CO2 laser peels treat skin issues more aggressively than microdermabrasion or chemical peels. The CO2 laser treats deeper lines and wrinkles, precancerous skin lesions, acne scarring and pigment changes.

## **Venus Viva Nano-fractional**

Now technology provides an option that is safe for all skin types. Working with radio frequency waves, the Venus Viva tightens existing collagen fibers in the dermis and stimulates collagen production cells (fibroblast) to make new collagen for the skin. Patients can see up to a 60% improvement in fine lines, scars and pigmentation problems, including Rosacea, after a series of 3 treatments performed 4 weeks apart.

**Venus Legacy™ - Body Sculpting and Skin Tightening** - The Venus Legacy™ combines **Multi-Polar RF, Magnetic Pulse Therapy (MP2)** and **VariPulse™** technology, to achieve superior clinical results in skin tightening, wrinkle reduction, fat reduction and the temporary reduction of cellulite. Treatments take approximately 30 minutes. A minimum of 6 treatments for the face/neck and 8 on the body are usually required.

## **IPL Laser Treatments**

The IPL Laser uses a variety of frequencies of light waves to treat the skin. It can be used for hair removal, skin rejuvenation, skin tightening, acne, Rosacea and small vascular skin lesions.

# *Price List*
